

## Expert feedback\_20160613

Two parts of feedback are included- feedback from the storyboard brainstorming session & internal page-to-page feedback from the research group.

### Feedback from storyboard brainstorming

1. Be able to contact project leads
2. Categorization of project teams. Eg. active, inactive, show up more often
3. Better navigation.
  - E.g. better navigation (stacks, state of projects, etc)
  - Minimize steps, filters, tags
  - The website looks 'static', not 'dynamic', thus may not be able to set up filters

#### More info in the listing

- Emails, status, mission,
- tech stacks, gov issues/departments, tasks completed/to dos, team members, tags/keywords,
- Good examples: amazon, best buy

#### Easy to update

What's code 4 sf? This part needs more explanation. Some may think it's a coding school

How to start a project (after reading the project page)

## **Page-to-page feedback from the research group at Code for SF (Anna, Jaoyi, James)\_20160613**

### **Landing page**

#### **Pros**

- Join different social groups (e.g. slack, github, meetup) (JY)
- Picture matching 'call for action' join (e.g. slack, meetup) (Anna)
- Anna likes the statistics and numbers (Anna)

#### **Cons**

- Clickability
  - All the big numbers are NOT clickable, not relative to users. They don't serve much of a purpose. (Jamie)
  - Upcoming events are actually clickable (JY)
- Upcoming event:
  - Upcoming events on the top is problematic, repeat every week anyway (Anna & James), why not just go to meetup (Anna)
- Projects: There needs to be more information. E.g. (James)
- Joins: Calls to actions, but not sure what one is joining, also new members may not want to join so many things. Projects are more important than joins. (James & Anna)

### **Project page**

#### **Pros**

#### **Cons**

- Not sure what keywords are (James)- why not just create 'topic' 'languages' and 'needs' (James)
- Not sure which projects are active (James)
- Alignment of grids (Jaoyi) May need to limit how many keywords and needs each project can key in

### **Project list page**

#### **Cons**

- No contact information
- Structure: mission, project, hard to scan
